Case Report - Patient 19 - 2025

Case Background

Male, Age: 28

Case Data

The patient's family contacted us for services after the patient's legal death had already been pronounced. They informed us that an autopsy had already been performed. We coordinated with the person who would immerse the brain in neutral buffered formalin for long-term preservation as soon as possible. The family later transported the patient's fixed brain to our facility. Upon arrival, the patient's brain was immediately placed in permanent storage in a container with 10% neutral buffered formalin, which was put in refrigeration.
