Case Report - Patient 9 - 2019

Case Background

Female, Age: 77

Case Data

The patient was legally pronounced. The family contacted us for services afterwards. They provided contact information for the private autopsy service where the patient was located. We then spoke with the specialist at the autopsy service. The doctor removed the patient's brain and placed it in formalin. We coordinated shipment to our facility. After receiving the shipment the patient's brain was placed in 10% neutral buffered formalin and 3% glutaraldehyde. The container was then placed in refrigeration for permanent storage.
